Synchrono® Launches SyncOperations™ to Help Manufacturers Automate Workflow and Solve Problems in Real Time

Aggregating Data from All Equipment, Processes and Enterprise Systems Makes Powerful Repository for Instant Performance Improvement

ST. PAUL, Minn. -- March 10, 2014 – Synchrono®, a leader in demand-driven manufacturing software solutions, today announced the launch of SyncOperations. SyncOperations software, powered by Savigent, will offer manufacturers the power to monitor and synchronize data from all equipment and processes in real time. This means faster automation of workflow and the ability to instantly track and improve performance, availability and quality.

SyncOperations serves as a real-time data historian that collects and analyzes data from both the machine level and from disparate company systems (ERP and CRM, for example) to offer production professionals, process engineers and continuous improvement teams a faster path a faster path to actionable information in order to enhance productivity and drive business results.

SyncOperations also integrates with other Synchrono systems. Instant updates from the plant floor are relayed to SyncManufacturing, the company's planning, scheduling and execution system, as well as SyncKanban, inventory replenishment software for dynamic adjustments and full synchronization of the manufacturing operation and extended supply chain.

Employing SyncOperations, manufacturers can:

• Execute real-time workflow automation
• Capture time-series process and event-based data from every phase of production
• See and instantly analyze data from both machines and all enterprise systems
• Get immediately actionable insight for continuous improvement efforts

"Many BPM and ERP solutions can crystallize your performance data for you to analyze in hindsight, but SyncOperations gives you real-time insight with information captured from across your enterprise," said John Maher, Synchrono vice president of product strategy. "This is an immensely powerful repository of information that can be leveraged for immediate action or to drive proactive, data-driven continuous improvements."

SyncOperations is powered by Savigent technology, whose Catalyst suite is a leader in helping manufacturers meet the challenges of workflow automation, real-time data collection, analysis, and systems integration.

SyncOperations will be debuted at MODEX 2014 in Atlanta, Ga. from March 17-20, 2014. For more information or to arrange a demo, please contact Pam Bednar at pbednar@synchrono.com.

About Synchrono

Synchrono® LLC is a leading provider of demand-driven manufacturing software and services that simplify complex manufacturing environments and transform business results. The company's planning, scheduling and execution and eKanban inventory replenishment systems are powerful on their own, and when combined with its operations solutions on the Synchrono Demand-Driven Manufacturing Platform, clients synchronize workforce, methods, machines, resources, data and more enabling flow from order inception through production and delivery. Aggregating information from its own applications as well as from both machine-level and disparate enterprise systems, the Synchrono Demand-Driven Manufacturing Platform provides a real-time visual information system that empowers everyone - from the top floor to the shop floor - with actionable information.

Synchrono helps clients manage constraints, improve flow, drive on-time delivery and maintain a competitive edge. Look to Synchrono for software that meets your demand. Sync with us at www.synchrono.com.
