

Synchrono[®] SyncView Software Enables the Real-Time Visual Factory

Instant Access to Information Across all Levels of the Manufacturing Process Empowers Real-Time, Informed Decisions to Improve Flow and Productivity

ST. PAUL, Minn. -- March 12, 2014 – Synchrono[®], a leader in demand-driven manufacturing software solutions, today announced the launch of SyncView™ software. SyncView is a real-time visual factory information system that provides everyone – from operations to the extended supply chain and from the shop floor to the top floor – with a dynamic view of what is happening at every stage of the manufacturing process.

[SyncView](#) software offers complete transparency, ensuring that everyone is working from the same data and with a clear view of the state of operations and the extended supply chain. Presenting activity from a variety of systems, SyncView automatically signals alerts and generates escalation and action plans to help every layer of the manufacturing team proactively address any quality or value-stream flow issues in real-time.

The software is highly interactive with user-directed views that enable users to quickly tap into greater detail to manage variability and constraints while monitoring machines and work cells. “There is no solution in the marketplace that can be implemented and configured to your needs that delivers granular, actionable insight with the speed and ease of SyncView,” said John Maher, Synchrono vice president of product strategy. “SyncView is the answer to the question, ‘How does *everybody* need to see our manufacturing enterprise *right now?*’”

Employing SyncView, manufacturers can:

- Provide organization-wide visibility for faster problem solving and operational effectiveness
- Generate real-time alerts with escalation and action plans
- Easily configure for enterprise, plant, role-, work cell- and machine-based views
- Make better decisions—faster—at the operational and strategic levels

SyncView presents machine-level data as well as information from disparate enterprise systems that is aggregated through [SyncOperations™](#) software from Synchrono and powered by Savigent. Planning, scheduling and execution data is synchronized through [SyncManufacturing™](#) software and inventory replenishment information is provided from [SyncKanban™](#) software, both Synchrono systems.

SyncView will be debuted at [MODEX 2014](#) in Atlanta, Ga. from March 17-20, 2014. For more information or to arrange a demo, please contact Pam Bednar at pbednar@synchrono.com.

About Synchrono

Synchrono® LLC is a leading provider of demand-driven manufacturing software and services that simplify complex manufacturing environments and transform business results. The company's planning, scheduling and execution and eKanban inventory replenishment systems are powerful on their own, and when combined with its operations solutions on the Synchrono Demand-Driven Manufacturing Platform, clients synchronize workforce, methods, machines, resources, data and more enabling flow from order inception through production and delivery. Aggregating information from its own applications as well as from both machine-level and disparate enterprise systems, the Synchrono Demand-Driven Manufacturing Platform provides a real-time visual information system that empowers everyone - from the top floor to the shop floor - with actionable information.

Synchrono helps clients manage constraints, improve flow, drive on-time delivery and maintain a competitive edge. Look to Synchrono for software that meets your demand. Sync with us at www.synchrono.com.
